Statement of Significance

Last updated on - January 11, 2008

The Victorian Railways Administrative Offices were opened in 1893. They were built by James Moore to the design of the Victorian Railways Department Engineering Office. The building consists of a basement and three levels above, extending 120 meters along the west side of Spencer Street.

Although designed to be built in bluestone, it is constructed of brick with the facades finished in stucco. It is symmetrical in plan, with a central main entrance flanked by secondary entrances at each end of the building, the whole design carried out in the Italianate Style.

It was one of the larger buildings in Melbourne at the time of its construction and reflects both the 'boom' conditions of the period and the importance of the railway system during the latter part of the nineteenth century. The central stairhall is the principal interior feature. The building has been much altered. The original pediments have been demolished and an additional floor and attic added in a Neo-French Style, in 1912 and 1922 respectively. The statuary was removed from above the main entrance in 1930 and the doorway under closed off in 1960.

The wrought iron area fencing; upon a bluestone plinth is included.
